PROFILE

Computer Science graduate with one year industry experience in backend and full-stack development, specializing in Java, Spring Boot, Node.js, and React. Demonstrated ability to design and deliver production ready RESTful APIs, implement secure JWT-based authentication, and deploy scalable applications on Microsoft Azure and AWS. Experienced in working with CI/CD pipelines and following Agile methodologies to support efficient, iterative development and continuous delivery. A collaborative team player with strong problem solving and a genuine passion for writing clean, maintainable code, eager to contribute to an Associate Software Engineer role.

PROFESSIONAL EXPERIENCE

- Intern Software Engineer, Neirah Tech Solutions**02/2026 | Remote
 - Developed a **Pharmacy SaaS system** using **Nest Js, React (TS), PostgreSQL**
 - Identified and fixed issues in the production environment of the **Campus Management System**
 - Designed scalable backend structure and **REST APIs**
 - Managed code with **Git/GitHub (branches, PRs, commits)**
 - Improved UI responsiveness and system usability
- Backend Engineer - Intern, Samuel Gnanam IT Center**07/2025 – 01/2026 | Jaffna
 - Built backend features using **Java, Spring Boot** for a hotel management system
 - Collaborated with frontend (**React, TypeScript**) to deliver integrated modules
 - Deployed the application on Microsoft Azure, ensuring reliable hosting and scalability
 - Led backend tasks: **code reviews, PRs, and team coordination**
 - Developed **REST APIs** for reservations, customer management, and workflows

PROJECTS

- Pharmacy SaaS System** 

Developed a Pharmacy SaaS platform using **NestJS, Express.js, TypeScript, PostgreSQL, and Prisma ORM** to manage daily pharmacy operations. Built key features such as sales billing, invoice generation, inventory management, batch tracking, expiry date management, and low-stock alerts. Created a simple and responsive UI to improve the checkout process and support POS thermal printer invoice printing. Integrated tax calculations into the billing system and worked on improving overall system performance, reliability, and user experience.
- Hotel Management System** 

Built a full-stack Hotel Management System as a team project using **React TypeScript, Spring Boot, and MySQL**, featuring hotel CRUD with pagination, room reservations, housekeeping workflows, customer management, invoicing, and analytics. Implemented secure JWT authentication, role-based access control, React Hook Form and integrated **TailwindCSS, Axios, and Spring Security** to ensure a scalable and maintainable architecture.

PUBLICATIONS

- 7th INTERNATIONAL RESEARCH CONFERENCE - 2025 (TRInC 2025)** 10/2025

Developed a web-based **Automatic Exam Scheduling system** for the Universities using **React, Node.js, and MongoDB**, powered by a **Genetic Algorithm** to generate conflict-free and capacity-aware exam timetables. The system automates exam allocation, prevents student clashes, optimizes venue usage, and provides an intuitive admin interface for timetable generation. This project significantly reduces manual planning effort and improves fairness and efficiency in academic scheduling.

EDUCATION

- BSc in Computer Science**06/2022 – 06/2025 | Trincomalee, Sri Lanka

Trincomalee Campus, Eastern University Of Sri Lanka

SKILLS

- Development Technologies**

Java | SpringBoot | Node.JS | Python | TypeScript | CSS | JavaScript | React
- Version Control**

Git | GitHub
- Database Management**

MongoDB | MySQL | PostgreSQL
- Cloud Technologies**

AWS | Microsoft Azure | SaaS (Software as a Service)
